

2.6 Clarification on EOC 1

We would like to clarify that the senior center presentation submitted as EOC 1 for Standard 2.6 qualifies as a feasibility study rather than a conceptual design discussion. The purpose of this study was to assess the viability of incorporating an aquatics component into the new senior center before moving forward with design.

The study evaluated three options:

1. A dry center (no aquatics)
2. A therapy pool
3. A full indoor pool

This analysis included site layouts for each option, project budgets, and operational costs such as staffing and supplies. Additionally, the study considered the impact of each option on other planned amenities, prioritizing elements based on public input. These findings were used to inform Council's decision-making regarding the feasibility of adding an aquatics component.
